## Section 3.4

## Limits at Infinity; Horizontal

 Asymptotes
## HORIZONTAL ASYMPTOTES

The line $y=L$ is called a horizontal asymptote of the curve $y=f(x)$ if either

$$
\lim _{x \rightarrow \infty} f(x)=L \quad \text { or } \quad \lim _{x \rightarrow-\infty} f(x)=L
$$

## LIMIT AT INFINITY

Let $f$ be a function defined on some interval $(a, \infty)$. Then

$$
\lim _{x \rightarrow \infty} f(x)=L
$$

means that the values of $f(x)$ can be made arbitrarily close to $L$ by taking $x$ sufficiently large.
Let $f$ be a function defined on some interval $(-\infty, a)$. Then

$$
\lim _{x \rightarrow-\infty} f(x)=L
$$

means that the values of $f(x)$ can be made arbitrarily close to $L$ by taking $x$ sufficiently small.

## THEOREM

1. If $r>0$ is a rational number, then

$$
\lim _{x \rightarrow \infty} \frac{1}{x^{r}}=0
$$

2. If $r>0$ is a rational number such that $x^{r}$ is defined for all $x$, then

$$
\lim _{x \rightarrow-\infty} \frac{1}{x^{r}}=0
$$
