

## Number Tricks, Patterns & Riddles

1. Choose any 3-digit number (e.g., 524). Multiply it by 7. Then multiply the result by 11. Then multiply the result by 13. What is the final answer?

2.  $111^2 = \underline{\hspace{2cm}}$  so  $\sqrt{12,321} = \underline{\hspace{2cm}}$ .

$1,111^2 = \underline{\hspace{2cm}}$  so  $\sqrt{1,234,321} = \underline{\hspace{2cm}}$ .

$\sqrt{123,454,321} = \underline{\hspace{2cm}}$  so  $\underline{\hspace{2cm}}^2 = 123,454,321$

3. Choose a number. Multiply it by 3. Add 6 to the result. Divide by 3. Subtract the original number. The result is  $\underline{\hspace{2cm}}$ .

4. Choose a number. Double it. Add 9 to the result. Add the original number. Divide by 3. Add 4. Subtract the original number. The result is  $\underline{\hspace{2cm}}$ .

5. Choose any 2-digit number. Multiply it by 13. Multiply the result by 21. Then multiply by 37. The result is  $\underline{\hspace{2cm}}$ .

6. Choose a number. Triple it. Add the natural number one larger than the original number. Add 11. Divide by 4. Subtract 3. The result is  $\underline{\hspace{2cm}}$ .

7. Look for a pattern, then complete the remaining problems.

$27 \times 23 = 621$      $12 \times 18 = 216$      $86 \times 84 = 7224$      $45 \times 45 = \underline{\hspace{2cm}}$      $62 \times 68 = \underline{\hspace{2cm}}$

8. What is the sum of the 10<sup>th</sup> row in the following triangular pattern?

$$\begin{array}{c} 1 \\ 2 + 3 \\ 4 + 5 + 6 \\ 7 + 8 + 9 + 10 \end{array}$$

9. What's the number?  $\underline{\hspace{2cm}}$

Clues: It's a 3-digit number and both a perfect square and a perfect cube.

10. True or False.     $12 \times 42 = 21 \times 24$   $\underline{\hspace{2cm}}$   
                                $13 \times 62 = 31 \times 26$   $\underline{\hspace{2cm}}$

11. Evaluate:  $\sqrt{\sqrt{\left(\sqrt{\left(\sqrt{2^2}\right)^4}\right)^2}}$

12. Evaluate:  $1 + \frac{1}{1 + \frac{1}{1 + \frac{1}{1 + \frac{1}{1}}}}$

13. Find  $\frac{1}{2} \cdot \frac{2}{3} \cdot \frac{3}{4} \cdot \frac{4}{5} \cdot \dots \cdot \frac{99}{100}$

14.  $1 \times 8 + 1 = \underline{\hspace{2cm}}$   
 $12 \times 8 + 2 = \underline{\hspace{2cm}}$   
 $123 \times 8 + 3 = \underline{\hspace{2cm}}$   
 $1,234 \times 8 + 4 = \underline{\hspace{2cm}}$

$12,345 \times 8 + 5 = \underline{\hspace{2cm}}$   
 $123,456 \times 8 + 6 = \underline{\hspace{2cm}}$   
 $123,456,789 \times 8 + 9 = \underline{\hspace{2cm}}$

15.  $99 \times 99 =$  \_\_\_\_\_  
 $999 \times 999 =$  \_\_\_\_\_  
 $9,999^2 =$  \_\_\_\_\_  
 $99,999^2 =$  \_\_\_\_\_

$33^2 =$  \_\_\_\_\_  
 $333^2 =$  \_\_\_\_\_  
 $3,333^2 =$  \_\_\_\_\_

$66^2 =$  \_\_\_\_\_  
 $666^2 =$  \_\_\_\_\_  
 $6,666^2 =$  \_\_\_\_\_

16.  $1 = 1 \times 1$   
 $1 + 3 = 2 \times 2$   
 $1 + 3 + 5 = 3 \times 3$   
 $1 + 3 + 5 + 7 =$  \_\_\_\_\_  
 $1 + 3 + 5 + 7 + 9 =$  \_\_\_\_\_  
 $1 + 3 + 5 + 7 + 9 + 11 + 13 + 15 =$  \_\_\_\_\_  
=  $10 \times 10$

17. Choose a number from 2 to 9. Multiply it by 41. Multiply the result by 271. The final answer is \_\_\_\_\_.

18. Choose any counting number. Multiply it by the next larger counting number. Add 17. The result is \_\_\_\_\_ (prime or composite).

19. Complete, and also give one more row in each pattern.

$1 = 1$   
 $3 + 5 =$  \_\_\_\_\_  
 $7 + 9 + 11 =$  \_\_\_\_\_  
 $13 + 15 + 17 + 19 =$  \_\_\_\_\_

---

20.  $1 = 1$   
 $1 + 8 =$  \_\_\_\_\_  
 $1 + 8 + 27 =$  \_\_\_\_\_  
 $1 + 8 + 27 + 64 =$  \_\_\_\_\_

---

21. Find  $\frac{2^{1000} - 2^{999}}{2^{1000} + 2^{999}}$ .

22. Find  $\frac{1}{2} + \frac{1}{5}$      $\frac{1}{3} + \frac{1}{4}$      $\frac{1}{6} + \frac{1}{7}$ . Generalize:  $\frac{1}{a} + \frac{1}{b} =$  \_\_\_\_\_.

\*23. Evaluate:  $1^2 - 2^2 + 3^2 - 4^2 + 5^2 - 6^2 + \dots + 199^2$ . Hint: Use the “difference of squares” factoring technique.
