MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

Given the linear correlation coefficient r and the sample size n , determine the critical values of r and use your finding to state whether or not the given r represents a significant linear correlation. Use a significance level of 0.05.

1) $r = 0.981, n = 25$

1) _____

- A) Critical values: $r = \pm 0.396$, significant linear correlation
- B) Critical values: $r = \pm 0.487$, no significant linear correlation
- C) Critical values: $r = \pm 0.487$, significant linear correlation
- D) Critical values: $r = \pm 0.396$, no significant linear correlation

2) $r = 0.168, n = 15$

2) _____

- A) Critical values: $r = \pm 0.514$, no significant linear correlation
- B) Critical values: $r = 0.514$, no significant linear correlation
- C) Critical values: $r = \pm 0.532$, no significant linear correlation
- D) Critical values: $r = \pm 0.514$, significant linear correlation
